WORK EXPERIENCE

Meijer Warehouse 855, Lansing, MI

March. 2023 - Present

Food Produce Clerk Team Member

- Efficiently assembled over 10 diverse food trays every 2 minutes in a high-speed assembly line, strictly adhering to company hygiene standards by following 3 sets of established sanitary protocols, ensuring both speed and compliance.
- Collaborated with team members to optimize production rates, applying effective teamwork strategies to streamline processes and maximize overall efficiency on the assembly line.
- Coordinated seamlessly with a team of 12+ members across 1 of 7 assembly line stations, utilizing strong time management skills to maintain high productivity in a fast-paced, supervisor-led environment.

United Parcel Service (UPS), Lansing, MI

May. 2021 - Sept. 2021

Warehouse Package Handler

- Efficiently sorted and allocated 30-40 packages per hour, adhering to a truck-specific loading process that ensured timely and accurate deliveries for 9:00 AM schedules, contributing to improved customer satisfaction and on-time delivery metrics.
- Successfully loaded packages in a high-pressure, fast-paced environment, completing full truck loading within a 5-hour window while maintaining 100% accuracy by decoding package barcodes and aligning them with truck-specific assignments, ensuring smooth operations and delivery efficiency.

SKILLS

Frameworks/Libraries – Leaflet.js, Swift UI, API Integration

Languages – SQL, HTML5/CSS3, JavaScript, PHP, Python, Java

Developer & Design Tools- Git, PhpStorm, VS Code, Adobe Dreamweaver, Microsoft Power BI, Form spree

PROJECTS

Michigan Food & Beverage Discovery Interface

- **Dynamic Grid Architecture:** Engineered a responsive layout featuring over 15 unique business components, ensuring visual consistency across various image formats and brand styles.
- **Interactive Leaflet Integration:** Implemented a functional map interface using **Leaflet.js** to provide users with localized business data and navigation.
- **User-Centered Modal System:** Designed and coded custom pop-up modules to present detailed location information, including image carousels and direct menu links, without navigating away from the main view.

Apple Developer Academy - Detroit. MI

Caloric Intake Tracking APP

Jan.2024 – Feb.2024

- Implemented an interactive swiping mechanism for food group selections (5 total), delivering randomized, unique facts with every swipe, ensuring users never receive the same fact twice, thereby enhancing engagement and educational value.
- Successfully developed a fully functional iOS mock application in 22 hours (2 hours ahead of deadline) as part of a 5-member team, leading efforts in research, UI/UX design, and programming under a 24-hour time constraint.
- Conducted user research revealing that overweight individuals are less likely to engage with traditional weight tracking apps. In response, my team and I aimed to create a more inclusive, child-friendly interface featuring an animated monster, which fostered a welcoming and non-judgmental user experience.
